4)Theme.

5)Plugin.

1)Laptop(computer) and Internet connection.

2)Wamp or xampp server(local server).

3)Wordpress package.

4)PHP version 5.2.4 or greater.

   My SQL version 5.0 or greater.

WordPress is an open-source and free Web publishing application, content management system (CMS) and blogging tool built by a community of developers and contributors. WordPress allows users to build dynamic websites and blogs that may be updated, customized and managed from its back-end CMS and integrated application and components.

❖ WordPress started in 2003 with a single bit of code to enhance the typography of everyday writing and with fewer users than you can count on your fingers and toes.
Since then it has grown to be the largest self-hosted blogging tool in the world, used on millions of sites and seen by ten millions of people every day.

❖ Matt Mullenweg and Mike Little co-founded WordPress.

BASIC STEPS :

Step 1:Install local server(WAMP or XAMPP).

Step 2:Start server.

Step 3:Wordpress package Copy from source and past in w directory.

Step 4:Open PHP my admin and create database.

Step 5:Open wordpress package in browser(localhost/your folder name)   (configure according to your database name and password).

Step 6:Run and install

Step 7:Login in admin panel (localhost/your folder name/wp-login.php).

Step 8:Visit front site and enjoy with wordpress.

STEP 1:Already install in my laptop

STEP 2: Start server

STEP 3:Copy package in directory

STEP 4: Create database

STEP 5 :Set Database Name and Password

Below you should enter your database connection details. If you're not sure about these, contact your host.

Database Name	GDG	The name of the database you want to run WP in.
User Name	root	Your MySQL username
Password		…and your MySQL password.
Database Host	localhost	You should be able to get this info from your web host, if `localhost` does not work.
Table Prefix	wp_	If you want to run multiple WordPress installations in a single database, change this.

Submit

STEP 6: Run and install

WORDPRESS
